OUTDOOR COLLECTION

OUTDOOR BACKPACK COLLECTION.

We are based in Porthmadog, North Wales which gives us a unique opportunity to test and develop all of our products right here in Snowdonia. We are blessed to have every kind of weather and terrain needed to really push our products to their limits and make sure they perform to the highest standard.

BACKPACK TECHNOLOGY

All of our hydration compatible packs have been specifically designed to fit a hydration drinks pouch up to a maximum size of 3 litres.

All of our fabrics have a water repellent coating which protects your belongings in light showers. For the days when the elements are truly against you we have a range of packs that come with a fully waterproof raincover in a concealed pocket.

The "Pro Fix" back panel is our entry level suspension system found on our larger backpacks. The combination of a fixed harness and deep padding give you exceptional comfort and ventilation where it is needed most.

Exclusive to our Explorer range of packs is our unique "Pro-Mech" suspension system. Using a combination of adjustable panels and locking buckles the user can adjust the length of the suspension harness to achieve the perfect fit.

Our "Cross Vent back panels" use raised pads of dense foam to ensure a good comfortable fit at all times whilst providing exceptional ventilation in and around the back area.

Perfect for warmer climates or the active user. Our range of Cross Wind "Air" packs feature a pre curved frame to create a padded yet fully ventilate back panel which allows exceptional ventilation without sacrificing too much pack space.

Where speed and weight are an issue we have constructed our packs using lightweight fabrics and minimalistic designs. Although lightweight, our "Active" packs are still made from incredibly durable materials.

To help you arrange your equipment more efficiently we have included additional zipped compartments and quick access pockets on a range of packs of our active packs.

Constructed to the same high standards associated with our outdoor range with addition of a dedicated pocket for carrying your tablet and other gadgets safely and securely.

Strategically positioned air mesh padding helps aid breathability whilst offering exceptional comfort.

As with our tablet compatible backpacks, we also have a collection of larger packs with a padded sleeve designed specifically for carrying your laptop or Notebook.

Whether you're out walking, running or cycling, we know how important it is to stay fully hydrated. Our H2O packs come with a 2.0L hydration bladder as standard.

Our "Terra Lite" fabrics are both lightweight and extremely durable to give you the best compromise between weight and strength. We use a range of lightweight polyester and Nylon ripstop fabrics across our Terra Lite fabric range.

The best possible combination of strength and durability without compromising on weight. Our Terra Pro fabrics are designed to endure a lot of punishment so they won't let you down when you need them most.

Our A4 compatible packs are designed specifically for carrying your files, folders and books.

VENTURE 10/20/30

Our Venture range of multipurpose daysacks are available in 3 different sizes. They are the perfect choice for multiple activities including days out or trips around town.

FEATURES

- Lightweight and comfortable
- Padded "Cross Vent" back panel
- Tough polyester fabrics
- One large compartment with a smaller front pocket
- Two mesh side pockets for water bottles
- Reflective detailing for added safety at night
